## **To Whom It May Concern,**

I am writing to express my interest in opportunities within Data Engineering, Analytics, Business Analysis, or Solution Architecture. With 6+ years of experience across enterprise data systems and a Master's degree in Data Science and Analytics, I bring a strong combination of technical depth, architectural thinking, and business-focused problem solving.

My background includes designing scalable ETL/ELT pipelines, integrating complex systems such as Oracle ERP, SQL Server, Snowflake, and Azure services, and building automated Python/PySpark workflows for high-volume data ingestion. I have hands-on experience with data modeling, cloud-native architectures, API integrations, and implementing data governance and quality frameworks.

Alongside engineering work, I have supported operations and business teams by translating requirements into KPIs, building Power BI dashboards, and enabling data-driven decision-making. I regularly create architecture diagrams, document data flows, and define best practices for scalable, secure, and compliant solutions.

I differentiate myself by combining technical expertise with strong communication skills—able to work with stakeholders, troubleshoot complex issues, and deliver solutions that are robust, efficient, and aligned to organizational goals. My experience spans Azure, AWS, Snowflake, Databricks, CI/CD, SQL, Python, and modern data engineering patterns.

Thank you for considering my application. I look forward to discussing how my skills in data engineering, analytics, and solution architecture can contribute to your team's success.

**Sincerely,**  
Harsh Joshi
